

AR WORLDWIDE Souderton, PA

Lamb planned, designed and built this three story addition to the existing facility for a manufacturer of RF and microwave amplifiers.

Each story of the addition was designed for a different application: the first floor is used for technical services and research and development, the second floor is additional manufacturing space that is tied into the existing space, and the third floor has the employee cafeteria and meeting rooms.

A design issue was that the foundation of the existing building had to be stabilized using advanced technology. This allowed construction of the addition immediately adjacent to the existing structure.
