

CAMPBELL SOUP COMPANY Camden, NJ

Lamb provided Master Planning, Detail Design and Construction for the renovations to a 150,000 s.f. Research & Development Center.

The facility is used for product sample development and testing. The purpose of the renovation was to deliver a modern, better appearing and more functionally operational facility. This involved better utilization of the existing and new laboratories, along with an increase in development kitchen space. Planning provided the related offices with better organizational effectiveness.
