

HAWAIIAN ELECTRIC CO. Honolulu, HI

Lamb provided Planning, Design and Construction Management Services for 13,000 s.f. of new and renovated space for a new Dispatch Control Center. The design and construction of the Control Center was complicated due to the restricted area of the site. The new facility was built on the ground floor of an existing 4 story parking garage next to HECO's office building.

Highlights of the project include a structure to withstand 100 mph winds, mechanical and electrical systems to insure continuous 24/7 operations, a biometric security system, custom designed consoles and a 48 foot long video wall.
