

MIDWEST ISO Carmel, IN

Lamb provided Planning, Design and Construction Oversight services for this 98,000 s.f. facility in Carmel, IN for Midwest Independent Transmission System Operator (MISO), serving the electrical transmission needs of much of the Midwest.

This tornado resistant facility houses the redundant electrical and mechanical systems inside of the hardened walls. The Control Room will eventually contain four video walls, one for each of the regions that will be monitored. From this location, MISO is able to accomplish their primary objective of “directing traffic” on the wholesale bulk electric power lines.
