

NORTHEAST UTILITIES Berlin, CT

Lamb provided Facilities Planning, Detail Design and Construction Oversight Services for the creation of a new 11,300 s.f. System Control Center. The SCC is located on the first floor of a pre-existing building on Northeast's headquarters property.

The retrofit required upgrades to existing Mechanical and Electrical systems to provide sufficient redundancy for the control operation. A key component of the Design involved maintaining operator ergonomics and proper sightlines to the new video wall in a space with low clear height available.
