

WAWA Wawa, PA

Lamb provided a long range Facilities Master Plan for Wawa allowing for rapid growth over the next five to ten years and maximizing productive use of the site.

The aerial photo shows the site partially developed with the new vehicle maintenance building (inset photo 30,000 s.f.). The most recent addition to the site is the office•training•visitors center (large photo at left). This two-story 22,000 s.f. building houses offices, training and conference facilities, and an audio-visual equipped visitors center.

Lamb provided Planning, Design and Construction Management for the entire project.
