

YBM MAGNEX Newtown, PA

Lamb provided complete Facilities Planning, Detail Design and Construction for a 32,000 s.f. headquarters expansion for this international manufacturer of industrial magnets. The new space included a 20,000 s.f. two story office area with a free-standing circular staircase highlighting the lobby.

A new 12,000 s.f. metallurgical lab adjacent to the original building was tied to the new office building by a glass walled connector corridor. The entire project was designed to blend seamlessly with the existing structure, while adding headquarters presence to the property.
